Product Name: Slug Study
Team Name: Slug Study
Date: November 26 2019

List of not working functions:

Function	Input
1. **Signing up as a tutor**	1. **Entering the same class more than once will cause an error in the data base because the primary key is based on the email and the class id for the DB insert. Therefore the program will try to insert the same unique key twice.**
2. **Signing up as Tutor** 3. **Browsing for a Tutor**	1. **Sometimes clicking submit will not work because SQLITE3 is not adept at handling concurrent requests. An error pops up saying that we need to flush before we commit.**
